REVIEW PACK · NOT AN APPROVAL

What the next coach build would use, and what Simon needs to check first

This brief explains the resource pack a previous engineering pass already inventoried, how each group would change what the coach says and shows, and the decisions that have to be yes or no before any of it is treated as signed off.

Hold. Simon reads this, opens the source folder, and marks each decision. Engineering implements only the items he approves. A draft mapping already exists in the codebase from an earlier pass. That draft is a proposal, not a lock.

For	Simon Agnew — trainer and knowledge-base owner
From	Ali Attia — engineering
Product	ShiftED AI — practice-based empathy and critical-thinking training for managers. Not therapy.
Source pack	Folder named ShiftedAI Resources. 264 files across 13 groups. Design docs, toolkits, info sheets, worksheets, NHS titles, infographics, and 10 guided audio files.
Drive link	Not retrieved in this session. The Google account connected to engineering does not contain this folder, and the dev-bot channel could not be opened. Paste the folder URL in the box on the last page before you send this to Simon.

How to use this document

Read it in order. Then open the source folder and spot-check the files named in each group — especially your own design documents in the root, the crisis files, and anything you consider clinical. Write on the decision page. Send the marked PDF back. Engineering does not change the live coach from this pack until that page is signed.

1. Confirm the source folder is the pack you meant engineering to use.
2. For each group, mark Keep, Change, or Leave out.
3. Answer the four open questions. Those block audio, licensing, crisis wording, and the new library categories.
4. Sign. Only signed rows move into the system.

The idea, in one page

The coach already follows a staged conversation: understand the situation, agree a goal and a few steps, practise, then check in. What it does not yet have, in a form you have signed, is your full resource library behind those stages. The proposal is to keep your files as the source of truth, and to let the coach retrieve a short, adapted hint from the right document at the right moment — never to paste a worksheet into the chat.

Five layers stay separate, matching your Skills and Knowledge Base spec. A framework is the idea (what anxiety or a thinking habit is). A skill is the move the coach walks someone through (breathing, a thought check, a small action). A protocol is a hard rule that overrides everything else (crisis signposting). A workbook is a practice outline the person can open. A resource is a title or a phone line, not a lesson.

On each turn the coach looks at the latest message, picks at most two skills, and injects one short line of guidance. The full worksheets stay out of the model prompt so the reply stays short and human. If the person talks about wanting to die or harming themselves, the crisis protocol replaces skills. The coach gives UK lines (Samaritans, NHS 111, SHOUT, Mind, PAPYRUS HOPELINE247) and stops. It does not run a clinician safety plan.

What Simon should feel, once this is approved and live: the coach still sounds like the coach you have been correcting — plain, one situation, one next step — and it reaches for your tools instead of inventing a technique.

What each group becomes

Counts are files in the inventory, including items we would skip as duplicates. "Becomes" is the user-facing result, not a file path.

Group	What Simon is being asked to accept
Root — your design docs (10)	The master spec. My Well-Being Toolkit, Sustainability Path, Opening Phase, burnout toolkit, anxiety and depression self-help toolkits, the trainer case study, and the note for Josh. These set the shape of the knowledge base and two worked examples (a scrolling afternoon; an internship avoided).
Resources root (4)	The stress-response model (brain and stress), kept once. Two screenshots become small infographics on the relevant practice page.
Anxiety info sheets (15)	Plain explanations of the anxiety cycle, thinking habits, safety behaviours, breathing, and muscle relaxation. Needle-phobia sheets are signposting only — the coach does not treat a phobia.
Back from the Bluez (9)	Depression overview used as short framework notes: ABC, thinking–feeling, core beliefs, self-management. Summaries, not the modules pasted in.
Depression info sheets (18)	Same rule. Behavioural activation, fun-and-achievement, problem solving, and grief are the parts the coach can actually use. Clinical treatment descriptions stay as background.
Depression worksheets (12)	Practice outlines: activity schedule, weekly goals, thought diaries, core-belief worksheet. The person sees a short exercise, not the original PDF.
Mind and cognitive process (7)	How thinking, attention, and stress interact. Framework notes the coach can mention in ordinary language.
Guided audio (10 MP3)	Belly breathing, muscle relaxation, and similar. The coach can name the exercise. Playback stays off until you say where the files may be hosted. Duplicate copies of the same tracks are dropped.
Mindfulness model images (13)	Compressed diagrams on the matching practice page. Duplicate image packs are kept once.
NHS CNTW self-help (9)	Titles and signposts on the Resources page, linking people to the public NHS guides. We do not republish the booklets.
Positive Psychology packs (153)	The largest group: strengths, values, gratitude, savouring, growth, self-compassion, meaning, stress and burnout exercises. Adapted into skills and short workbooks. Original PositivePsychology.com pages are not copied. This group needs your licensing answer before it ships.
Suicide prevention (2)	Crisis protocol and the Resources page only. PAPYRUS HOPEBOX may be mentioned as an idea. The clinician quick guide is not run by the bot.
Worry (2)	A short worry framework plus a worry-time skill: park the worry, give it a set window, come back to the task.

What the person using ShiftED would notice

Library. New practice areas sit beside the existing emotional-intelligence exercises: Wellbeing and resilience, Values and strengths, Stress and regulation, Grief and loss. Each opens as a short workbook, sometimes with one diagram.

In the conversation. If someone is spiralling, the coach can offer a grounding or breathing step. If they are stuck in a prediction, a small behavioural experiment. If they have no next action, problem solving or a pleasure-and-mastery plan. If they are grieving, a support map — not a therapy protocol. The coach still agrees the goal before it hands out homework.

Resources page. UK crisis lines, including PAPYRUS HOPELINE247 (0800 068 4141) and SHOUT, plus NHS CNTW self-help titles. A one-line HOPEBOX note, wording for you to confirm.

What does not change. Sign-in, journeys, the staged conversation, your trainer feedback (a saved correction still applies to everyone), and the rule that the coach speaks in plain language and mirrors the person.

Lines we will not cross

ShiftED stays training for managers. The pack contains clinical material. Those files are used only to know what to refuse.

No pasted worksheets. PositivePsychology.com packs, CCI-style sheets, and NHS booklets are paraphrased or signposted. The original wording stays in your Drive folder.

No phobia treatment, no trauma writing exercise, no Stanley-Brown safety plan run by the bot.

No new homework before a goal is agreed. Your “no direction” correction still wins over a clever worksheet.

Crisis language ends the skills. The coach signposts and does not keep coaching the plan.

Decisions — mark one

Write Yes, No, or Change, and a note if you want different wording.

#	Decision	Your mark
1. Licensing	May we ship adapted paraphrases of the PositivePsychology.com packs inside a paid training product? If no, that group (153 files) stays out.	Yes / No / Change Note:
2. Audio	Where should the 10 guided recordings live, and may the product play them? Until you name a host, the coach can describe the exercise and cannot press play.	Yes / No / Change Note:
3. Library categories	Keep Wellbeing and resilience, Values and strengths, Stress and regulation, and Grief and loss next to the existing emotional-intelligence categories?	Yes / No / Change Note:
4. Crisis wording	Confirm the Resources page lines: PAPYRUS HOPELINE247 0800 068 4141, SHOUT, and a short HOPEBOX mention. Change any sentence you would not say yourself.	Yes / No / Change Note:
5. Clinical boundary	Confirm needle phobia, trauma writing, and clinician safety planning stay as signposts only.	Yes / No / Change Note:
6. Your root documents	Confirm the ten root files (toolkits, opening phase, sustainability model, case study) are the ones that should drive the coach. Flag any file that is draft or private.	Yes / No / Change Note:

After you sign

Engineering will do only the rows you marked Yes or Change. The order is fixed so the coach does not gain a pile of new skills before the rules are stable.

1. Apply your wording edits to the crisis lines and any skill you marked Change.

2. Drop every group you marked No, including the Positive Psychology pack if licensing is not cleared.

3. Wire approved workbooks into the library the person already opens, with one diagram where you allowed the image.

4. Point guided audio at the host you name. Leave it silent if you have not.

5. Redeploy the site. A code change is not live until the host rebuilds.

6. You test one conversation as yourself and one as a trainee: a worry, a stuck goal, and a crisis phrase. We adjust from those three, not from a new feature list.

The database migration that stores the new workbook rows is written and not applied. It stays unapplied until this page comes back signed.

Source folder

Simon’s pack lives in Google Drive under the name ShiftedAI Resources. Engineering could see the inventory (file names and the proposed mapping) and could not open the folder from the Google account connected on 22 October 2026. Do not guess a link. Paste the real folder URL below, check that Simon can open it, then send this PDF.

Drive folder URL

_____

_____

Who can open it: Simon · Kara · Louise · Joshua · Ali

Sign-off

I have opened the source folder. The decisions above are my instruction. Engineering may implement only the rows I marked Yes or Change.

Name _____ Date _____

Signature _____

Prepared 22 October 2026 from the ShiftedAI Resources inventory (264 files) and the knowledge-base protocol already in the project. File names in the source folder are Simon’s. This PDF does not reproduce worksheet text.
